SUMMARY

Full stack developer experienced in building production-ready web applications with React, Next.js, Node.js, Express, and GraphQL. Currently working as a Full Stack Developer Intern at Vrixaalabs, building both GraphQL-based backend systems and frontend interfaces for a multi-app social platform, alongside co-building Alpine, a travel-tech app. Skilled in frontend-backend integration, authentication, REST/GraphQL APIs, and relational + NoSQL database design. Proven track record in hackathons, with a strong ability to rapidly prototype ideas into working products under pressure.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, HTML, CSS
Frontend	React.js, Next.js, Tailwind CSS
Backend	Node.js, Express.js, GraphQL, REST APIs, JWT, PostgreSQL, Prisma, MongoDB
Tools	Git, GitHub, Vercel

EXPERIENCE

Full Stack Developer Intern — Vrixaalabs

- Building GraphQL-based backend systems and frontend interfaces for Vrixaal Connect, a hybrid social platform spanning a four-app architecture (backend, web app, admin, super admin).
- Collaborating with the engineering team on API design, Git branching workflows, and code reviews in a production codebase.

Frontend Contributor — TU-Codes, Tezpur University

- Contributed to the club's official website, collaborating with a team of developers using Git and GitHub workflows.

Workshop Facilitator — Tailwind CSS Session

- Conducted an online workshop on Tailwind CSS for beginner developers, simplifying core concepts through live coding.

PROJECTS

Alpine — Budget Travel Planner *React · TypeScript · Express · MongoDB · Tailwind CSS*

- Co-building a travel-tech app that plans affordable trips across Northeast India, generating full budget breakdowns for transport, stays, and duration based on firsthand travel experience.
- Building backend architecture (Express, MongoDB, Zod validation) and a responsive React/Tailwind frontend as one of three collaborators.

JaaneKhana — AI-Based Food Label Analyzer *React · Tailwind CSS · REST APIs · Node.js*

- Built a full stack application that analyzes food labels using AI and returns nutritional insights and health scores in real time.
- Won 1st place at the NeuralX Hackathon, competing against 30+ teams.

Anonymous — Anonymous Discussion Platform *React · Supabase · Tailwind CSS · JWT · Vercel*

- Built a Reddit-style anonymous discussion platform supporting threaded posts, upvotes, and topic categorization.
- Implemented end-to-end authentication and row-level authorization using Supabase; deployed to Vercel.

HACKATHONS & ACHIEVEMENTS

- Winner — NeuralX Hackathon: Built JaaneKhana, an AI-powered food label analyzer, 1st place among 30+ teams.
- Finalist (Top 6 in India) — IEEE IdeaRun: Selected nationally for product ideation and rapid prototyping.
- Selected Contributor — Nexus Summer of Code (NSoC): Contributing to open source projects aligned with the JS/TS full stack ecosystem.

CURRENTLY LEARNING

- Deepening PostgreSQL and Prisma for production-grade relational database and ORM design.
- Strengthening GraphQL API design and system design principles for scalable backend architecture.
